

Award-winning managed detection and response

The financial and reputational damage inflicted by current cyber threats makes early detection vital. The resources needed to proactively identify daily attacks can place a huge strain on your business however. From hiring and training qualified security personnel through to sourcing and maintaining the most up-to-date technology, implementing a successful cyber security strategy is exhaustive.

Network Security Solution of the Year

ThreatDetect™ from Redscan is a fully-managed detection and response service offering businesses of all sizes enterprise-grade protection against cyber threats. Integrating cutting-edge detection technology with latest cyber research and in-depth human analysis, this 24/7 Security Operations Centre-as-a-service acts as a virtual

extension of an organisation's internal resources to supply the tools, intelligence and expertise needed to hunt for and remediate the latest sophisticated attacks. Through proactive threat investigation and delivery of clear notifications and remediation advice, ThreatDetect relieves the pressure on in-house IT teams while significantly reducing cyber security risk.

All-out response to major attacks

Should an incident become critical, Redscan's Cyber Incident Response Service helps your business coordinate and manage its response from beginning to end. Our experienced team is highly skilled at mitigating the effects of cyber-attacks, investigating how they propagate and providing clear advice to support swift remediation.

“ThreatDetect is a cost effective service that gives us peace of mind that we are doing all we can to protect our clients, our business, our staff, our counterparties and other partners”

Ben Lloyd, Head of IT Infrastructure
TT International

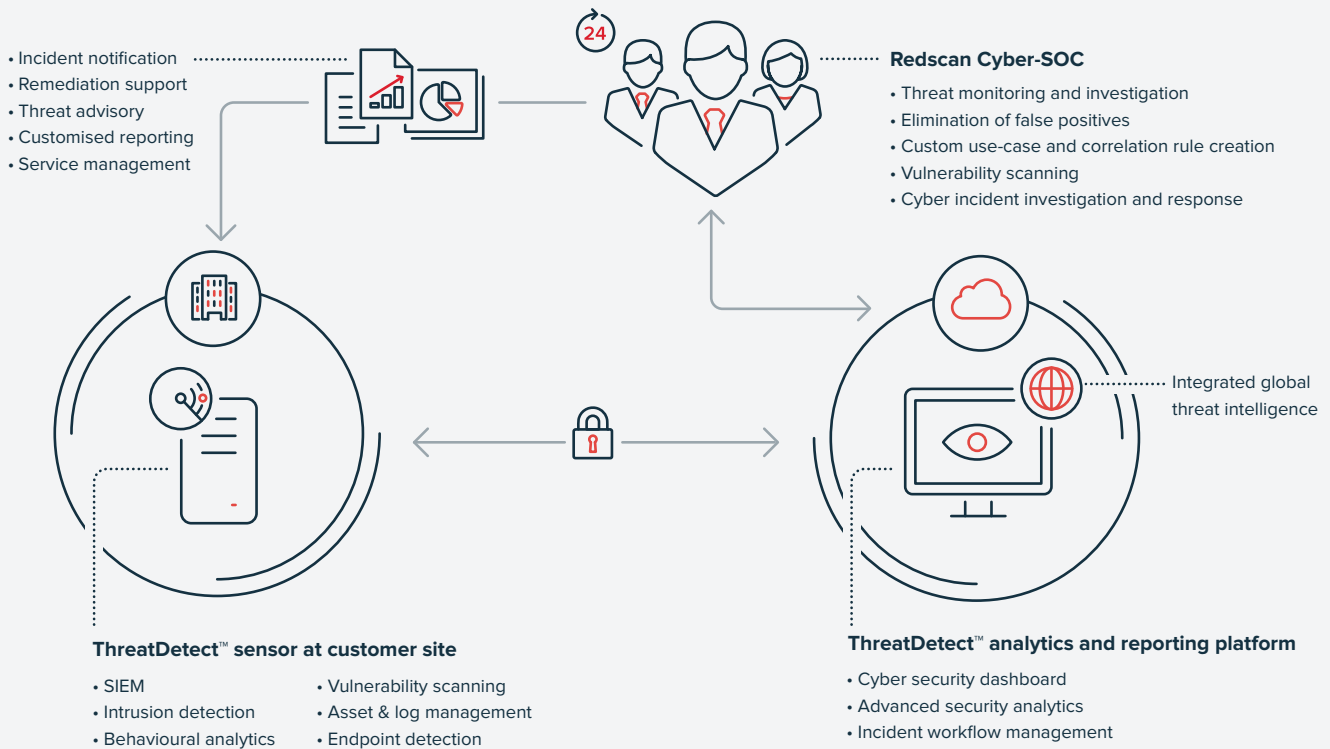

Business benefits

- ✓ Significantly reduce information security risk and enhance boardroom and investor confidence
- ✓ Thwart the latest sophisticated threats that outdated detection systems and single solutions can miss
- ✓ Rapidly respond to genuine incidents and gain a clear understanding of the risk level posed
- ✓ Improve efficiency by enabling in-house teams to focus on fixing rather than discovering threats
- ✓ Avoid up-front investment in expensive, maintenance and resource-intensive technology
- ✓ Remove the need to recruit and train internal security professionals
- ✓ Receive end-to-end help and support detecting and mitigating complex security vulnerabilities
- ✓ Obtain enterprise-level protection at a price that can cost less than hiring just one security engineer

Key features

- + An all-in-one platform incorporating latest SIEM, IDS, behavioural analytics and other advanced technologies
- + Skilled security analysts and engineers: CISSP, CISSP- ISSAP, CISA, CISM, CEH, OSCE, OSWP & CREST
- + Advanced threat detection and analytics incorporating proprietary rulesets and algorithms
- + Up-to-the-minute knowledge of threats via 'Red Team' research and security exchanges like CiSP
- + Full incident investigation with clear remediation advice and reports suitable for all key business stakeholders
- + Exceptional 24/7 service and flexible SLAs to provide help when needed

ThreatDetect™ - Complete managed detection & response for advanced cyber security

Key components of our Cyber SOC-as-a-service

- Qualified experts**
 A team of dedicated security analysts, engineers and researchers trained to the highest standards
- Leading technology**
 An advanced platform including the latest SIEM, intrusion detection, behavioural analytics and scanning technologies
- Live threat visibility**
 Rapid threat notification and a live picture of security health delivered via intuitive cyber dashboard
- Advanced analytics**
 Continually developed behavioural analytics, proprietary algorithms and rules to detect sophisticated attacks
- Integrated intelligence**
 A clear understanding of threats via internal cyber research and live intelligence from sources including CiSP
- Proven processes**
 Compliance with ISO9001, ISO27001 & PCI-DSS for demonstration of best security practice
- Detailed reporting**
 Hand-written reports containing thorough insight and analysis enables stakeholders to understand current risks
- Live incident response**
 Experienced cyber responders on hand to help remediate breaches and conduct broad and deep investigation
