

Award-winning managed detection and response

The advanced and evolving nature of cyber threats means that even with strict security controls in place, your business is not immune to being compromised. To minimise cyber security risk, having the capability to identify and eliminate attacks that evade perimeter defences is now essential.

Network Security Solution of the Year

The resources needed to proactively identify attacks can place a huge strain on your business however. From hiring and training qualified personnel through to sourcing and maintaining the most up-to-date technology, setting up and managing an in-house security operation can be a significant challenge.

ThreatDetect™ from Redscan provides the around-the-clock protection needed to mitigate the danger posed by the latest sophisticated threat actors. Integrating leading security professionals, advanced detection and deception technologies, and latest industry intelligence, this cost-effective MDR service monitors network infrastructure to hunt for threats and provides the early notification and remediation advice necessary to respond swiftly and effectively.

Defending your business through an ‘offensive’ approach to security

Redscan’s approach to defence reflects the belief that the only way to successfully safeguard against the latest attacks is to ruthlessly adopt the mindset and techniques of the adversary. By closely monitoring the security landscape to understand the latest tools, tactics and procedures used by criminals, our experts ensure ThreatDetect is optimised to quickly identify and react early to threats.

“ThreatDetect is a cost-effective service that gives us peace of mind that we are doing all we can to protect our clients, our business, our staff, our counterparties and other partners”

Ben Lloyd, Head of IT Infrastructure
TT International

Business benefits

- ✓ Significantly reduce information security risk and enhance boardroom and investor confidence
- ✓ Thwart the latest sophisticated threats that outdated detection systems and preventative technology such as firewalls can miss
- ✓ Rapidly respond to genuine incidents and gain a clear understanding of the risks posed
- ✓ Improve efficiency by enabling in-house teams to focus on fixing rather than discovering threats
- ✓ Avoid up-front investment in expensive, complex and resource-intensive technology
- ✓ Remove the need to recruit and train in-house security professionals
- ✓ Receive end-to-end help and support detecting and mitigating complex security vulnerabilities
- ✓ Obtain enterprise-level protection at a price that can cost less than hiring just one security engineer

Key service features

- + An experienced team of CSOC experts trained to the highest professional standards
- + The latest detection, deception and incident response technologies, all fully installed, optimised and maintained
- + Real-time threat notification and analytics via Redscan’s proprietary CyberOps™ platform
- + Orchestration of threat information from Redscan Labs and leading intelligence sources
- + Full incident investigation with clear remediation advice and reports suitable for compliance needs such as the GDPR and PCI DSS
- + Comprehensive monitoring of on-premise, cloud, virtual and hybrid environments
- + Exceptional 24/7 service and flexible SLAs to provide help when needed

ThreatDetect™

Managed threat & breach detection with integrated incident response

Key components of our cost-effective MDR service

- Qualified experts**
 A team of dedicated security analysts, engineers and researchers trained to the highest standards
- Cutting-edge technology**
 An advanced platform including the latest SIEM, Intrusion Detection, Behavioural Monitoring and scanning technologies
- True threat visibility**
 Genuine threat notification and a live picture of security health delivered via intuitive CyberOps platform
- Advanced analytics**
 Custom-developed behavioural analytics, proprietary algorithms and rule sets to detect sophisticated attacks
- Integrated intelligence**
 Threat research from Redscan Labs and latest intelligence from leading exchanges such as CISP
- Tried and tested processes**
 Compliance with ISO9001, ISO27001 & PCI DSS for adherence with best security practices
- Detailed reporting**
 Regular customer reports containing thorough security insight and analysis
- Cyber incident response**
 Experienced incident responders on hand to help investigate and remediate breaches
