

Bridge the cyber security knowledge gap with an on-demand expert

In order to combat the latest advanced threats and address regulatory challenges such as the incoming General Data Protection Regulation (GDPR), it's important to make continuous improvements to your organisation's cyber security. In the face of a global talent shortage however, recruiting a dedicated professional with the knowledge and leadership required to prepare and execute a successful cyber security strategy is time-consuming, expensive and often simply not viable.

A cost-effective service providing the support needed to reduce security risks

Redscan's Virtual Chief Information Security Officer service enables your organisation to call upon a highly-qualified and experienced security professional as and when required. By acting as an extension of in-house resources and fully understanding business needs and strategy, a Redscan Virtual CISO can help to assess cyber risk plus develop and implement the policies, procedures and controls needed to strengthen defences and achieve compliance standards.

66% of UK companies lack the cyber security workers to meet their needs*
